

Elias Dengo

Software engineer

Personal details

-  Elias Dengo
-  eliasdengo5@gmail.com
-  0923324515
-  Addis Ababa, Ethiopia
1000 Addis Ababa
-  Male
-  [linkedin.com/in/elias-dengo-242241243](https://www.linkedin.com/in/elias-dengo-242241243)

Skills

- Node.js development
- Java programming
- Database administration
- React.js frontend development
- SOA and middleware integration
- Linux and Windows server management
- Python programming
- WebLogic server administration

Languages

- English
- Amharic

Education

Arbaminch University
AMIT, Arbaminch

Feb 2019 - Aug 2023

I completed my Bachelor Degree of Software Engineering with Excellent distinction

- Gained proficiency in multiple programming languages such as Java, C++, and Python, emphasizing clean and efficient code.
- Developed comprehensive knowledge in software development life cycles including analysis, design, implementation, testing, and maintenance.
- Understood principles of computer networks, operating systems, and cybersecurity relevant to modern software engineering.

Employment

YOUNG GRADUATE TRAINER (YGT)

Oct 2023 - Jan 2023

Zemen Bank SC, Addis Ababa

- Conducted hands-on training sessions on digital banking channels including internet banking, mobile banking, ATM, POS, and CR2 products.
- Configured and maintained network infrastructure, including firewalls, switches, routers, and servers, ensuring secure and efficient connectivity.
- Implemented and managed database administration tasks, application integration, and data analytics to support banking operations.
- Performed system administration on Windows and Linux servers, including deployment and configuration of devices in various banking departments.
- Utilized security tools such as SIEM and Nagios for monitoring and conducted penetration testing on web and mobile applications to enhance cybersecurity.
- Developed and deployed e-learning platforms using Node.js, MongoDB, HTML, CSS, and JavaScript on IIS servers to support internal training initiatives.
- Supported branch opening and ATM deployment projects by assisting in system setup and network configuration to ensure seamless operations.
- Collaborated with senior bank experts to gain in-depth knowledge of core banking systems and WebLogic administration through practical sessions.
- Participated in cross-departmental rotations gaining exposure to MIS, application integration, and security protocols within the banking industry.

Database and integration

Feb 2024 - Jun 2025

Zemen Bank, Addis abba

- Designed and implemented database schemas and optimized queries to improve application performance and scalability.
- Developed and maintained integration solutions using SOA principles and WSO2 middleware, ensuring seamless communication between heterogeneous systems.
- Administered multiple relational and NoSQL databases including MongoDB, PostgreSQL, Oracle, and MS SQL Server, handling tasks such as installation, configuration, patching, upgrading, and replication.
- Developed backend services using Node.js and Spring Boot, and created responsive front-end components using React, HTML, CSS, and JavaScript.
- Performed system administration and troubleshooting on Linux and Windows OS environments to maintain database and application uptime and reliability.
- Managed WebLogic server administration, including deployment and monitoring of web applications for optimal performance and security.
- Implemented database backup and recovery strategies to ensure data integrity and availability.

- Collaborated with development teams to integrate databases with web applications, enhancing data flow and system reliability.
- Monitored database performance and conducted tuning to improve speed and efficiency across various platforms.
- Implemented end-to-end database integration frameworks utilizing SOA and WSO2 to streamline data exchange across banking applications.
- Led database patch management, upgrading, and replication strategies across diverse environments, enhancing system resilience and reducing downtime.
- Deployed advanced monitoring and troubleshooting protocols for Linux and Windows servers to ensure continuous database availability and optimal performance.

Database administrator

Jun 2025 - Present

Zemen Bank, Addis Ababa

- Administered and optimized database performance across MongoDB, PostgreSQL, Oracle, and MS SQL Server environments to ensure high availability and responsiveness.
- Designed and implemented robust database backup and recovery plans to protect critical banking data and maintain business continuity.
- Collaborated with development teams to develop and optimize complex queries and database schemas supporting scalable software applications.
- Conducted database security assessments including patch management and vulnerability testing to uphold data integrity and comply with cybersecurity standards.
- Led the design and deployment of database installation and configuration processes to enhance operational efficiency and security in banking systems.
- Implemented comprehensive database backup, restore, and recovery strategies tailored to critical banking applications to ensure data integrity and minimize downtime.
- Developed and managed machine learning-driven projects such as loan prediction and house price prediction systems using python to support data-driven decision-making in banking operations.
- Designed and maintained efficient database schemas and optimized query performance to support scalable banking applications and reduce latency.
- Zemen bank Loan Request Management system development using Nodejs and MongoDB for backend and html, css,js and axios for frontend development
